

Affordable Warmth 2010 Rotherham Ltd

**Helping our customers keep heating bills down
Getting the most out of your heating system.**

Please ask your Heating Servicing Engineer if you need help.

We will:

- Explain how to operate the heating controls in your home.
- Ensure installed heating appliances are working efficiently (as a part of the annual heating / Gas Safety Checks).
- Offer advice on how to reduce energy bills in your home.

Three good reasons to use energy more efficiently in your home:

- Heating fuel and energy costs will keep on rising.
- Wasted Energy is bad for the environment and YOUR PURSE.
- Energy efficient homes can keep you warm and healthy.

At the end of the Decent Homes programme, 2010 Rotherham Ltd and our partners will have upgraded around 18,000 heating systems across Rotherham Council's housing. Where possible, our customers will have highly efficient heating systems.

**If your household spends more than one tenth
of its income on energy bills for your home,
then contact us to arrange for free and
confidential affordable warmth advice.**

or the Energy Efficiency Advice Centre on freephone 0800 512012

10 Money (Energy) Saving Hints and Tips

Turning your Thermostats down by just 1 degree could reduce your heating bill by up to 10%.

Turn Radiators down low in rooms you don't use often.

Turn Hot Water Cylinder Thermostats down to 60 degrees C but not below 60 for health grounds.

Don't leave Hot Water Taps running or dripping.

Turn Thermostats down to 5 degrees when you go away – to prevent pipes bursting in cold weather.

Don't put furniture close to Radiators it restricts the heat output.

Putting on an extra layer of clothes may allow you to turn down the heating thermostat by a degree or two.

Don't cover Radiators with curtains – tuck them in behind, so the heat can radiate into the room.

Open the curtains when the sun shines – it can help to warm the room up, and then draw them at dusk to reduce heat loss.

Fit draught excluders on letterboxes, keyholes etc.
